MULTIMEDIA PLAYER ACCESSORY

ATARI
MEMORYTRACK™
For Your Jaguar CD

Just what you need to track high scores and save game level status and other cool stuff for your new Jaguar CD!

With the new MEMORY TRACK for your Atari Jaguar CD Player you can keep track of important information that you want to save for Jaguar CD games. You can store information on things like:

- **High scores**
- **Game progress to a specific point or level so you can pick up where you left off**
- **Specific character configurations that you may have created**
- **Particular levels or worlds that you want to keep track of and refer to later**

And with over 125,000 bytes of storage capacity, MEMORY TRACK can store information like this for up to 250 Jaguar games!

MEMORY TRACK is a cartridge that fits into the cartridge slot on your Jaguar CD Player. Most Jaguar CD game disks will be pre-programmed with whatever special instructions you will need to utilize MEMORY TRACK storage of important information you want to keep. You should consult the individual Jaguar CD game manual for specific "save" features and instructions (although many Jaguar CD games will provide instructions via prompts built into the game).

The simple MEMORY TRACK interface will make it easy to sort by game name or size (number of bytes of memory) for easy reference to whatever file you are looking for and allow you to delete stored information that you no longer want to keep.

Congratulations on the purchase of your new Jaguar CD Player. Now get on track to capture the best gaming moments with the new MEMORY TRACK! To locate the authorized Jaguar dealer nearest you or for more information on the new MEMORY TRACK, call 1 (800) GO-ATARI.
